INDIAN INSTITUTE OF TECHNOLOGY ROORKEE
NAME OF DEPTT./CENTRE: **DEPARTMENT OF HYDROLOGY**

1. Subject Code: **HY-511** Course Title: **Hydrologic Elements and Analysis**

2. Contact Hours: **L: 3** **T: 1** **P: 0**

3. Examination Duration (Hrs.): **Theory** 3 **Practical** 0

4. Relative Weightage**:** CWS 25 PRS 0 MTE 25 ETE 50 PRE 0

5. Credits**:** 4 6. Semester**: Autumn** 7.Subject Area**: PCC**

8. Pre-requisite**: NIL**

9. Objective: To provide necessary background about various hydrological processes, storages, instrumentation, recording of data and analytical techniques.

10. Details of Course:

S. No.	Contents	Contact Hours
1.	**Introduction**: Hydrological cycle, storage, water balance.	2
2.	**Atmospheric Water System:**Characteristics of Atmosphere, Atmospheric circulation patterns, weather systems, water vapour, precipitable water**.**	4
3.	**Precipitation**: Precipitation types, measurements, analysis, mean precipitation, IDF and DAD analysis.	4
4.	**Hydrologic Abstractions:** Interception and depression storage; Evaporation: Evaporation processes, Influencing factors, measurement and estimation; Evapotranspiration: measurement and estimation; Infiltration: Infiltration processes, factors affecting infiltration, measurement of infiltration, empirical and analytical models of infiltration.	6
5.	**Hydrometry:** Gauge and discharge sites, site suitability, river stage, velocity measurement, area-velocity method, tracer techniques, stage-discharge relation.	5
6.	**Runoff:** Factor affecting, runoff characteristics of stream, hydrograph-unit hydrograph, S-hydrograph, IUH, Clark and Nash IUH;flow duration analysis, flow mass analysis, estimation of peak runoff, time-area method of runoff computation.	10
7.	**Frequency Analysis**: Random variables, Probability distribution functions: normal, log-normal, Gumbel, Pearson type-3 uniform distributions; Frequency analysis; Goodness of fit measures.	4
8.	**Groundwater:** Types of aquifers, Darcy's Law, Flow and storage parameters, well hydraulics.	3
9.	**Flood Routing:** Governing equations, Hydrologic routing: Reservoir flood routing, Muskingum method.	4
	Total	**42**

11. Suggested Books:

S. No.	Name of Authors /Books /Publishers	Year of Publication/ Reprint
1.	Subramanya, K., “Engineering Hydrology”, Tata McGraw Hill	2013

INDIAN INSTITUTE OF TECHNOLOGY ROORKEE
Name of the Department /Centre: **DEPARTMENT OF HYDROLOGY**

1. Subject Code: **HY- 512** Course Title: **Computer Programming**

2. Contact Hours: **L: 2** **T: 0** **P: 2/2**

3. Examination Duration (Hrs.): **Theory** 2 **Practical** 0

4. Relative Weightage**:** CWS 10 PRS 15 MTE 25 ETE 50 PRE 0

5. Credits**:** 2 6. Semester**: Both** 7.Subject Area**: PEC**

8. Pre-requisite**: Nil**

9. Objective: The objective is to introduce computer programming

10. Details of Course:

S. No.	Contents	Contact Hours
1.	**Number System:** Binary and decimal numbers system, integer and floating point representation	6
2.	**Programming Fundamentals:** Principle of object oriented programming, introduction to keywords, identifiers, constants, operators, expressions, type conversions	7
3.	**Conditional and Loop Control Structures:** if, if...else, switch, while and do...while, for loops	5
4.	**Arrays:** Single and multi-dimension arrays, pointers and strings	5
5.	**Functions:** Function prototyping and scope, passing parameters to functions including arrays, values return by functions	5
	Total	**28**

List of Practicals:

i. Development of programs for statistical analysis of hydrological time series viz rainfall, discharge and temperature etc.
ii. Development of programs for randomness and trend analysis of hydrological data.
iii. Development of programs for discharge computations using area-velocity methods, time-area methods etc.
iv. Development of programs for spatial interpolation and areal distribution of hydrological data like rainfall, high frequency groundwater levels etc.
v. Development of program using OOP in C++ for systematic data storage and retrieval for a river catchment.

11. Suggested Books:

2. Contact Hours: **L: 3** **T: 1** **P: 2/2**

3. Examination Duration (Hrs.): **Theory** 3 **Practical** 0

4. Relative Weightage**:** CWS **15** PRS **15** MTE **30** ETE **40** PRE **0**

5. Credits**:** **4** 6. Semester**: Both** 7.Subject Area**: PEC**

8. Pre-requisite**:** **Nil**

9. Objective: To introduce the principles of atmospheric science for understanding impact of climate change.

10. Details of Course:

S. No.	Contents	Contact Hours
1.	**Atmosphere:** General circulation, composition and structure of atmosphere, role of meteorology in hydrology	4
2.	**Precipitation Process**: Adiabatic process, stability and instability of atmosphere	2
3.	**Atmospheric Thermodynamics:** Equation of state, Dalton's of partial pressure, Poisson'slaw, equivalent potential temperature, concept of air parcel, virtual temperature, dry adiabatic lapse rate and saturated adiabatic lapse rate, hydrostatic equilibrium equation, dispersion of air pollutants	6
4.	**Clouds**: Classification, formation and characteristics,Monsoon circulation, monsoon troughs, monsoon depression and tropical cyclones	4
5.	**Climate and Climate Change**: Components, Phenomena, radiative forces, Energy budget and transport, atmospheric circulation, ocean circulation, land-surface process, carbon cycle	6
6.	**Physical processes:**Conservation of momentum, equation of state, temperature equation, continuity equation, conservation of mass	2
7.	**Climate Models:** Introduction to GCM and RCM simulations, SRES, downscaling GCM outputs	6
8.	**ENSO:** El Niño basic, Tropical pacific climatology, El Niño mechanism, ENSO indices, predictions and teleconnections	3
9.	**Greenhouse effects and climate feedbacks:**Global energy model, greenhouse effect and global warming, climate feedback	3
10.	**Climate Model scenarios for global warming:** Greenhouse gases, aerosols forcing, global-average response to GhG warming	6

	scenarios on temperature, rainfall, sea, ice/snow, extreme events	
	Total	**42**

1. Subject Code: **HY- 514** Course Title: **Hydrogeology**

2. Contact Hours: **L: 3** **T: 1** **P: 2/2**

3. Examination Duration (Hrs.): **Theory** 3 **Practical** 0

4. Relative Weightage**:** CWS 25 PRS 0 MTE 25 ETE 50 PRE 0

5. Credits**:** 4 6. Semester**: Both** 7.Subject Area**: PEC**

8. Pre-requisite**:** **Nil**

9. Objective: The objective is to introduce the basic geological concepts in occurrence and movement of groundwater.

10. Details of Course:

S. No.	Contents	Contact Hours
1.	**Introduction:** Hydrogeology and its scope, hydrologic cycle and its relation to groundwater, classification of natural waters, merits and demerits of groundwater age of groundwater, basic geology	4
2.	**Classification of Aquifers:**Hydrological classification of geological materials, types of aquifers, geological formations as aquifers.	4
3.	**Hydraulic properties of aquifers and related materials:** Porosity and its estimation, factors controlling porosity, hydraulic conductivity and methods of its estimation, transmissivity, storativity, specific yield leakage factor, hydraulic resistance and specific capacity.	4
4.	**Occurrence and Movement of Groundwater:**Geological controls in occurrence and movement of groundwater, role of land forms, geological structures, stratigraphic and sedimentation controls, geographic distribution of aquifer materials	4
5.	**Methods of Groundwater Exploration**: Geomorphological and geological techniques, hydrological techniques, remote sensing andits application in groundwater targeting, indicators of groundwater, use of geophysical techniques in pinpointing water well locations	5
6.	**Drilling Techniques:** Methods of shallow well drilling, percussion, hydraulic rotary, reverse rotary and down the hole hammer techniques	3
7.	**Ground Water in Different Geological Formations:**Hydrogeology of crystalline rocks, volcanic rocks, clastic and carbonates rocks and unindurated sedimentary formations, ground water quality in various geological formations.	6

8.	**Preparation of Hydrogeologic Maps:** Geologic andhydrogeologicmaps, field methods of hydrgeological mapping, representation of hydrogeological data on geological maps	4
9.	**Ground Water in Regions of Climatic Extremes:** Occurrence and movement of groundwater in Arid &semi arid regions and in glacial regions, groundwater management and quality in different regions	4
10.	**Hydrogeological Divisions of India:** Groundwater provinces of India and their hydrogeological features, aquifer characteristics and yield of wells, management of groundwater	4
	Total	**42**

4. Relative Weightage**: CWS** 25 **PRS** 0 **MTE** 25 **ETE** 50 **PRE** 0

5. Credits**:** 4 6. Semester**: Spring** 7.Subject Area**: PCC**

8. Pre-requisite**: Nil**

9. Objective: The objective is to introduce the fundamentals of hydraulics of open channel flow and fluvial hydraulics.

10. Details of Course:

S.No.	Contents	Contact Hours
1.	**Introduction:**Review of fundamentals of hydraulics, hydrostatics and hydrodynamics	3
2.	**Energy Depth Relationships:** Open channel flow, basic features, uniform flow, critical flow, specific energy, specific energy diagram, flow transitions, momentum principles, hydraulic jumps and computer assisted calculations	8
3.	**Gradually-Varied Flow Theory:**Steady state gradually varied flow, governing differential equation, characteristics and classification; step methods, direct integration method, graphical integration method of water surface profiles, computer oriented algorithms	8
4.	**Unsteady Flow:**Transient gradually varied flow, Saint Venant's equations, simplified hydraulic routing methods- diffusion wave theory, kinematic wave theory, approximate convection–diffusion equations, overland flow theory, computer oriented algorithms	8
5.	**Fluvial Hydraulics:**Introduction, bed forms, incipient condition, sediment load-bed, suspended and total loads, field measurements	8
6.	**Design of Channels:**Regime channels, design of stable channels-critical tractive force approach	4
7.	**Softwares:**Overview of hydraulic modeling softwares	3
	Total	**42**

INDIAN INSTITUTE OF TECHNOLOGY ROORKEE
NAME OF DEPTT/CENTRE: **DEPARTMENT OF HYDROLOGY**

1. Subject Code **:** **HY - 522** Course Title**: Stochastic Hydrology**

2. Contact Hour: **L:3** **T : 1** **P: 0**

3. Examination Duration (Hrs): **Theory :** 3 **Practical:** 0

4. Relative Weightage: CWS : 2 PRS 0 MTE 2 ETE 5 PRE 0

5. Credits : 4 6. Semester: **Both** 7. Subject Area: **PEC**

8. Pre-requisite: **Nil**

9. Objective: To introduce various probability and stochastic models for the modelling of hydrologic processes and the basic tools required for forecasting, simulation and frequency prediction.

10. Details of Course:

S. No.	Contents	Contact Hours
1.	Definition, objectives, components and importance of time series analysis	4
2.	Analysis for trends and periodicityusing non-parametric and parametric tests, peridogram, and, P_{max} and P_{min} test for selection of significant harmonics; spectral analysis,Tests for short term and long term dependence	10
3.	Auto correlation analysis, AR, MA, ARMA, ARIMA models and their application in data generation and forecasting	6
4.	Synthetic data generation for various distributions and their transformations	4
5.	Generation of streamflows usingThomas Fiering models, and other disagreegation and agreegation models, and multisite models Generation of rainfall using transition probability matrix method and multisite models	5
6.	At site, at site regional and regional frequency analysis; graphical and analytical methods for normal lognormal Gumbel GEV and generalized logistic distributions, L moments based methods, Goodness of fit tests like Chi square, K-S test and L moments based tests, Partial duration series, standard error of estimates, Risk analysis	9
7.	Analysis of low flows, forecasting of low and high flows, graphical and analytical methods, models adopted by Central Water Commission	4
Total		**42**

5. Credits**:** 4 6. Semester**: Spring** 7.Subject Area**:** **PCC**

8. Pre-requisite: **NIL**

9. Objective: The course aims at introducing Surface water modelling tools and techniques

10. Details of Course:

S. No.	Contents	Contact Hours
1.	Hydrologic Simulation overview: Classification of Hydrological Models, Components of Hydrological Simulation Models, System identification, conceptualization, implementation and documentation,	4
2.	Overview of event based models and theoretical background	3
3.	Overview of continuous modelsand theoretical background	3
4.	Numerical solution techniques, parameter optimization, calibration and validation	6
5.	Overview of open source and commercial simulation models for hydrological modelling and forecasting	5
6.	Catchment scale modeling using TOPMODEL; Large scale modeling using VIC Model, Ethics in modeling	7
	Total	**28**

List of Practicals:

i. Hydrological Modelling using open source software like HEC-HMS, HEC-GeoHMS.
ii. Hydrodynamic modelling of River systems using open source softwarelike HEC-RAS, HEC-GeoRASetc.
iii. Hydrodynamic modelling of River systems using licensed software like Mike family software.
iv. Theoretical background of snow-melt runoff modelling including practical using open source software like WINSRM.

INDIAN INSTITUTE OF TECHNOLOGY ROORKEE
NAME OF DEPTT./CENTRE: **DEPARTMENT OF HYDROLOGY**

1. Subject Code: **HY- 531** Course Title: **Watershed Behavior and Conservation Practices**

2. Contact Hours: **L: 3** **T: 1** **P: 0**

3. Examination Duration (Hrs.): **Theory** 3 **Practical** 0

4. Relative Weightage**:** CWS 25 PRS 0 MTE 25 ETE 50 PRE 0

5. Credits**:** 4 6. Semester**: Autumn** 7.Subject Area**: PCC**

8. Pre-requisite: **Nil**

9. Objective: To understand the impact of land use changes on various hydrological cycle components, estimation of peak runoff, soil erosion, its measurement and control measures.

10. Details of Course:

S. No.	Contents	Contact Hours
1.	Physical elements of a watershed, effects of land use changes on hydrological cycle components	3
2.	Concept of vegetative management of water yield and quality; Ecosystem Services: Benefits to Human Societies	3
3.	Natural and Human-induced watershed changes: Agents of watershed changes; Climate change effects	4
4.	Watershed planning, monitoring and assessment, Watershed experiments, extrapolation of results from representative and experimental basins, regional studies; Natural resource inventories	4
5.	Estimation of Runoff using SCS and Rational Method suggested for Indian conditions	3
6.	Land capability classification	2
7.	Watershed development in India, Common Guidelines 2008, Institutional arrangements at National, State, District, Project and Village level, Allocation of funds, case studies; Corporate Social Responsibility (CSR)	4
8.	Watershed management - experiences and challenges; Role of socio-economic drivers	3
9.	Water erosion process, factors affecting erosion, types of erosion, assessment of erosion, universal soil loss equation, control measures for erosion, temporary and permanent measures	6
10.	Wind erosion and its assessment, vegetative and mechanical control	4

	measures	
11.	Special Topics: Wetland systems, watershed consideration in engineering applications, Water harvesting techniques, elements, development of modern harvesting techniques; Watershed Ecology	6
	Total	**42**

8. Pre-requisite: **Nil**

9. Objective: The course aims at developing understanding of the basic principles of planning and assessment in respect of field projects without endangering the environment and ecosystems.

10. Details of Course:

S. No	Contents	Contact Hours
1.	Environment components and communities, concepts of integrative level and environmental planning, projection of human population growth and related demands; Type of projects, propelling issues and problem definition in planning,	6
2.	Description of environmental setting and indicators, assessments of physical environment; Geologic, hydrologic, climate and ecological considerations, Biogeochemical cycles and biodiversity resources and their classification, equitable use and conservation	6
3.	International and national legislation on environmental planning and assessment of projects; Introduction to various acts (Water, Air, Land and Wild Life), network and role of agencies involved at various stages of planning and implementation	5
4.	Assessment of natural and manmade hazards, Air, water and soil pollution: sources and impacts, vulnerability analysis, carrying capacity analysis, water and ecological footprint: concepts and assessment, environmental flows	8
5.	Environmental modeling and simulation process, prediction and scenario projection, introduction of appropriate air and water pollution models	6
6.	Impact assessment frameworks and methodologies, decision support prespective, conflict resolution, mitigation of hazards	6
7.	Case studies related to environmental planning and assessment of major projects	5
	Total	**42**

5. Credits: 4 6. Semester: **Autumn** 7. Subject Area**:** **PCC**

8. Pre-requisite: **Nil**

9. Objective: The course aims to provide basic background for understanding the atmospheric, aquatic and terrestrial environment characteristics and skills for assessment of their quality.

10. Details of Course:

S. No	Contents	Contact Hours
1.	Overview of Environment, components of environment and their interaction, source and uses of water.	2
2.	Concepts from water, soil and air pollution chemistry, Microbiology and ecology, solution, electroneutrality, equilibrium, reaction kinetics, microbes in aquatic/terrestrial systems, types and functions, aquatic and terrestrial ecosystems.	8
3.	Introduction to water, soil and air quality concepts, impurities and quality characterization, physical, chemical and biological parameters, Soil and water quality issues, transport and transformation processes in surface and groundwater systems	8
4.	Introduction to analytical methods and instruments, field sampling methods, storage and preservation of samples, analytical estimation, analytical quality control and error analysis modeling concepts	10
5.	Mandates and existing monitoring networks of field surface and groundwater organizations, design and review of monitoring networks, evaluation and rationalization of networks, case studies.	5
6.	Analysis and interpretation of quality data, concepts of statistical techniques for data analysis, analysis for correlations, variability trends, violations, reporting and graphical presentation	6
7.	Legislation and management in environment quality, water and air quality criteria and standards, national and international perspective.	3
	Total	**42**

List of Practicals:

i. Concepts and methods of Gravimetric analysis, Measurement of Total Solids, Total Dissolved Solids, Total Suspended Solids, Measurement of Sulphates and Oil and Grease.
ii. Concepts and methods of Electrometric analysis, Measurement of EC, Types of sensors and their application in measurement of Fluoride, Nitrate and Dissolved Oxygen.
iii. Concepts and methods of Volumetric and optical analysis, Measurement of Total Alkalinity, Hardness and its constituents and Chloride, Measurement of Turbidity and Phosphates
iv. Measurement of Organics viz, Biochemical Oxygen Demand (BOD), Chemical Oxygen Demand (COD) and Total Organic Carbon (TOC)
v. Introduction to advanced instruments viz. Ion Chromatograph, Gas Chromatograph, Voltammeter

INDIAN INSTITUTE OF TECHNOLOGY ROORKEE
NAME OF DEPTT./CENTRE: **DEPARTMENT OF HYDROLOGY**

1. Subject Code: **HY- 537** Course Title: **Remote Sensing and GIS Applications in Hydrology**

2. Contact Hours: **L: 3** **T: 1** **P: 2**

3. Examination Duration (Hrs.): **Theory** 3 **Practical** 0

4. Relative Weightage**:** CWS 10 PRS 15 MTE 25 ETE 50 PRE 0

5. Credits**:** 4 6. Semester**: Autumn** 7.Subject Area**:** **PCC**

8. Pre-requisite: **Nil**

9. Objective: To introduce the fundamentals of Remote Sensing and geographical information systems (GIS) and their applications in hydrology.

10. Details of Course:

S. No.	Contents	Contact Hours
1.	**Principal of Remote Sensing**: Definition, active and passive remote sensing, aerial and space platforms	2
2.	**Electromagnetic Radiation**: EMR interaction with atmosphere, atmospheric windows and their significance, interaction with earth surface materials, specular and diffuse reflection surfaces, spectral reflectance curves and spectral signature, spectral reflectance curves of water, soil and vegetation	8
3.	**Satellite Programs and Sensors:** Classification, description of multi spectral scanning – along and across track scanners satellite sensors , resolution types, description of sensors in Landsat, SPOT, IRS series	4
4.	**Satellite Image Interpretations:** Basic principles of image interpretation, visual interpretation, elements of image interpretation, digital image processing, supervised and unsupervised classification	6
5.	**Introduction to GIS**: Components, data types – spatial, attribute and metadata, raster and vector data and their comparison, data abstraction, maps and map scale	3
6.	**Coordinate System:** Datum, geographical coordinate system, projected coordinate system and their need, basic projection types, polyconic and UTM projections	4
7.	**Data Input and Editing:** Raster and vector data formats, georeferencing, data input using scanner and on-screen digitization, input using XY data, data editing, attribute data	2
8.	**Basic Analysis:** Union, Intersection, clip, merge, append, map algebra	2
9.	**Spatial Analysis**: Reclassification, overlaying, buffering, unions,	4

	intersections; DEM, DEM analysis, contour and cut-fill analysis, process modeling using GIS, IDW, spline and kriging, interpolation techniques	
10.	**GPS and KML:**Introduction to global positioning system and KML format	2
11.	**Remote Sensing and GIS Applications:** LULC Classification,flood plain mapping and zoning, ground water studies, erosion sedimentation studies, watershed and drainage delineation	5
	Total	**42**

1. Subject Code : HY - **538** Course Title: **Hydrological Data Collection, Processing and Analysis**

2. Contact Hours : **L:3** **T : 1** **P: 2/2**

3. Examination Duration (Hrs) : **Theory :** 3 **Practical:** 0

4. Relative Weightage: CWS 15 PRS 15 MTE 30 ETE 40 PRE 0

5. Credits: 4 6. Semester**:** **Autumn** 7. Subject Area: **PCC**

8. Pre-requisite: **Nil**

9. Objective: The objective is to present the details of various methods for hydro-meteorological data collection, processing and analysis**.**

10. Details of Course:

S. No.	Contents	Contact Hours
1.	Types of hydro-meteorological data and their importance, time oriented, space oriented and relational data	3
2.	Observation of hydro-meteorological data - rainfall, temperature, evaporation, discharge and other parameters, observational and instrumental errors and quality control	4
3.	Storage, transmission and retrieval of data, different formats adopted by IMD, CWC and WMO	2
4.	Design and optimization of monitoring systems for rainfall, evaporation, gauge and discharge networks and groundwater data monitoring stations	4
5.	Simple and multiple linear and non-linear regression; hypothesis testing	4
6.	Estimation of missing data in rainfall, runoff and other parameters, record extension for rainfall and runoff data, interpolation and Kriging techniques, statistical rainfall- runoff models	5
7.	Development of stage discharge curves using graphical, physical and analytical methods for various types of streams	3
8.	Automatic weather stations, types, data storage and retrieval, automatic water level recorders, types, data storage,retrieval and analysis	3
9.	Analysis of randomness and trends in hydro-meteorological data; Computation of statistical parameters and standards errors, components of time series, concepts of short and long term dependence in hydro-meteorological data	5
10.	Estimation of extremes using frequency analysis; Graphical and analytical methods for normal, lognormal and Gumbel distributions	4

11.	Open sources of data and software assisted processing	5
Total		**42**

List of Practical:

i. Observation of rainfall, temperature and evaporation.
ii. Observation of groundwater levels in observatory.
iii. Observation of gauge and discharge in lab/field.
iv. Demonstration of hydrological processes using Total Hydrologic Station.
v. Measurement of infiltration rates.

11. Suggested Books:

NAME OF DEPTT./CENTRE: **DEPARTMENT OF HYDROLOGY**

1. Subject Code: **HY-545** Course Title : **Surface Water Quality Modeling**

2. Contact Hours: **L: 3** **T: 1** **P: 0**

3. Examination Duration (Hrs) **Theory** 3 **Practical** 0

4. Relative Weightage: CWS 25 PRS 0 MTE 25 ETE 50 PRE 0

5. Credits: 4 6. Semester: **Both** 7. Subject Area**:** **PEC**

8. Pre-requisite: **Nil**

9. Objective: The objective is to provide basic understanding of the transport and fate of contaminants and relationships of various processes in the surface water environment

10. Details of Course:

S. No	Contents	Contact Hours
1.	**Review of Water Quality:** Concept, Characterization and assessment, water quality issues in surface and groundwater bodies, monitoring and analysis protocol	5
2.	**Modeling:** Concept and process, Classification of models, selection of models, spatial and temporal resolution	3
3.	**Mathematical framework and solution techniques:** Overview of differential/ partial differential equations, analytical and numerical solutions, error and sensitivity analysis	4
4.	**Hydrodynamic Processes and Parameters in Surface and Groundwater Bodies:** Conservations laws, advection and dispersion, mass balance equation, governing equations in Cartesian and curvilinear coordinates, initial and boundary conditions	6
5	**Fate and transport of pollutants in aquatic environment:** Point and nonpoint sources of pollutants, sedimentation, degradation, decay, sorption processes and their kinetics, processes and governing equations for water quality variables (dissolved oxygen, biochemical oxygen demand, pathogens nutrients and algae etc.)	6
6	**Data Concerns:** Model needs, review of available monitoring networks, design of new networks, rationalization, field collection, storage and transportation of samples	4
7.	**Available Water Quality Models:** Introduction to QUAL2E, AWSP, AGNPS etc: Model frame work, process equations, solution techniques, boundary conditions, data formats, calibration and validation schedule, error analysis, TMDL concept and application,	10

	case studies	
8.	**Water Quality Management:** Systems engineering concepts design of experiments, available methods, application to the polluted environment	4
	Total	**42**

2. Contact Hours: **L: 3** **T: 1** **P: 2/2**

3. Examination Duration (Hrs) **Theory** 3 **Practical** 0

4. Relative Weightage: **CWS** 25 **PRS** 0 **MTE** 25 **ETE** 50 **PRE** 0

5. Credits: 4 6. Semester: **Both** 7. Subject Area**:** **PEC**

8. Pre-requisite: **NIL**

9. Objective: The course aims to develop the understanding of contemporary treatment technologies that are used for remediation of soil and water pollution

10. Details of Course:

S. No.	Contents	Contact Hours
1.	**Introduction**: Surface and ground water characteristics, soil formation and classification; types, sources and properties of contaminants affecting water and soil water-soil-contaminant interactions, analytical methods	6
2.	**Membrane technologies:** Type and characteristics of membranes used for water remediation, basis of membrane selection, osmotic pressure, concentration polarization, electrolyte diffusion; Suspended particles removal from water by macro-filtration and ultra-filtration; Dissolve ions removal from water by nanofiltration and reverse osmosis, case studies	6
3.	**Nanotechnology**: Classification and characteristics of nano-scale materials, basic approach and methods of nanoparticles synthesis, theories of nanosized materials, functionalized nanomaterials, applications and perspectives of nanomaterials in water treatment; Nanoscale zero-valent iron (ZVI) for remediation of organic and inorganic contaminants; Magnetic nanoparticles for removal of heavy metals., case studies	6
4.	**Phytoremediation:** Mitigation of pollutants in soil and water by phytoextraction, phytostabilization, phytotransformation, rhizodegradation to degrade heavy metal, pesticides, hydrocarbons, etc.; influence of environmental factors on phytoremediation. natural and constructed wetlands, type of constructed wetlands, applications in wastewater and stormwater treatment, design considerations, case studies	6
5.	**Physical/Chemical Treatment Technologies:** Water Remediation: Electro-coagulation for removal of hydrocarbon, suspended solids and heavy metals; Wet-oxidation for the removal of dissolved and suspended components; Electro Dialysis and Ion exchange for water softening and NOM removal; Adsorption for the removal of	8

	atoms, ions and molecules. Soil Remediation: Dredging, vapor condensation and soil vapor extraction for volatile organic compounds; Solidification/ stabilization, verification, grouting and soil capping to reduce the mobility of contaminants; In situ oxidation and peroxide catalyzed remediation for removal of organic contaminants; Critical fluid extraction and soil flushing/washing for treatment of saline soil and the removal of ions, metals, gasoline, fuel oils and pesticides; Alkali soil remediation using gypsum, pyrite, sulphur; Acidic soil remediation using lime.	
6.	**Biological Treatment Technologies:** Bioreactor landfill, bioventing, biostimulation, bioaugumentation, microbial degradation, aerobic and anaerobic bio-transformations for removal of biodegradable organic contaminants from soil, case studies	5
7.	**Thermal Treatment Technologies:** Removal of organic contaminants from soil by thermal desorption, distillation, thermal evaporation, incineration, gasification, cement kiln, pyrolysis, thermal depolymerisation, waste autoclaves, gas and residue treatment plant; Energy recovery plant and emissions clean-up methods, case studies	5
	Total	**42**

List of experiments:

i. Determination of anion and cation removal efficiency of reverse osmosis and nano filtration membranes.
ii. Synthesis of nanoparticles, measurement of their characteristics by XRD and application.
iii. Removal of contaminants from water in constructed wetland batch reactors
iv. Removal of contaminants from water by electro-coagulation and electro-dialysis.
v. Use of adsorption batch reactors for removal of heavy metals.
vi. Batch experiments to study biological degradation of organic compounds from water and soil.
vii. Laboratory scale alkali soil remediation using gypsum.
viii. Laboratory scale acidic soil remediation using lime.

7.	Bear, J., 1972. Dynamics of Fluids in Porous Media. Am. Elsevier Publishing Co., New York: 764 pp.	1972

INDIAN INSTITUTE OF TECHNOLOGY ROORKEE
NAME OF DEPTT./CENTRE: **DEPARTMENT OF HYDROLOGY**

1. Subject Code: **HY-562** Course Title: **Irrigation and Drainage Engineering**

2. Contact Hours: **L: 3** **T: 1** **P: 2/2**

3. Examination Duration (Hrs.): **Theory** 3 **Practical** 0

4. Relative Weightage**:** CWS 25 PRS 0 MTE 25 ETE 50 PRE 0

5. Credits**:** 4 6. Semester**: Spring** 7.Subject Area**: PCC**

8. Pre-requisite**: Nil**

9. Objective: To understand the principles and processes necessary to effectively manage water resources through well designed drainage and irrigation systems

10. Details of Course:

S. No.	Contents	Contact Hours
1.	**Introduction**: Historical perspective of irrigation and drainage, world and Indian scenario today.	1
2.	**Soil-water-plant relationship:** Soil Characteristics, water movement in soils, Measuring Soil-Water Content, Basic Concepts of Soil-Water Dynamics, Soil-Water Retention, Drainable Porosity, Unsaturated Hydraulic Conductivity, Water Extraction by Plant Roots, Soil-Water Dynamics in Relation to Drainage.	5
3.	**Irrigation:**Water requirement of crops; yield response and crop consumptive use, evapotranspiration,Irrigation water requirement,factors affecting irrigation requirement, duty-delta relationship, methods of determining duty of water, CROPWAT model.	7
4.	**Irrigation Methods:**Surface method of irrigation – border, check basin, furrow; Sub-surface method of irrigation, sprinkler irrigation, trickle irrigation. irrigation scheduling; design of irrigation channels; irrigation water and infiltration; Hydraulics of irrigation system.	7
5.	**Irrigation Efficiency**: Factors affecting irrigation efficiency, water conveyance efficiency, application efficiency, water storage efficiency, project efficiency, conjunctive use in irrigation.	2
6.	**Land Drainage:** The Need for Land Drainage, Types of drainage problems, drainage investigations, classes of drainage, surface drainage systems, sub-surface drainage systems, hydrologic and hydraulic design of drainage systems.	7
7.	**Sub-surface Flow to Drains:** Steady-State and Unsteady-State Equations, Special Drainage Situations, Drainage of Sloping Lands, Interceptor Drainage, Open Drains with Different Water Levels and of	7

	DifferentSizes, Drainage of Heavy Clay Soils.	
8.	**Typical Problems of Agricultural Lands**: Soil Salinity and Sodicity, Salinity in relation to Irrigation and Drainage, Classification of Salt-Affected Soils, Salt Balance of the Rootzone, Salt Equilibrium and Leaching Requirement, Reclamation of Salt-Affected Soils, waterlogging, causes and remediation.	6
	Total	**42**

INDIAN INSTITUTE OF TECHNOLOGY ROORKEE
NAME OF DEPTT./CENTRE: **DEPARTMENT OF HYDROLOGY**

1. Subject Code: **HY-563** Course Title: **Vadose Zone Hydrology**

2. Contact Hours: **L: 3** **T: 1** **P: 2/2**

3. Examination Duration (Hrs.): **Theory** 3 **Practical** 0

4. Relative Weightage**:** CWS 15 PRS 10 MTE 25 ETE 50 PRE 0

5. Credits**:** 4 6. Semester**: Both** 7.Subject Area**:** **PEC**

8. Pre-requisite: **Nil**

9. Objective: This course unit covers the theory and principles of soil physics, evaporation, infiltration, soil moisture storage and soil moisture and solute dynamics in the unsaturated zone**.**

10. Details of Course:

S. No.	Contents	Contact Hours
1.	Soil physics, Unsaturated permeability and soil water retention models, Hysteresis, anisotropy, Non-linear behaviour of the unsaturated permeability, Pedotransfer functions to estimate soil hydraulic properties	6
2.	Soil moisture measurement methods, soil moisture monitoring, Infiltration theories and measurement, Green-Ampt model, time of ponding, Deep percolation and recharge	5
3.	Soil-water-plant atmospheric relationship, Irrigation requirements, Evapotranspiration models, Leaf area index, crop coefficient, soil moisture stress, Root compensation mechanism, Hydraulic redistribution, Salinity stress and effects on crop biomass.	6
4.	The basic principles of moisture dynamics in the unsaturated zone, Derivation of Richards Equation. Quantifying water uptake by plants, Linear and non-linear models, Solute uptake kinetics by plant roots, Active and passive uptake.	8
5.	Analytical and numerical solutions of soil water flow (including hands-on experience of the Hydrus1D and 2/3D model, Numerical modeling of steady and transient flows in vadose zone, Iteration techniques, convergence and stability, mass balance, Initial and boundary conditions	10

6.	Macropore flow and the preferential principles (wetting front instability, fingered flow) - Solute transport in the unsaturated zone, breakthrough curves, sources and sink terms, macropore flow and preferential flow, soil thermal properties, heat flow in soils.	7
	Total	**42**

2. Contact Hours: **L: 2** **T: 1** **P: 0**

3. Examination Duration (Hrs.): **Theory** 2 **Practical** 0

4. Relative Weightage**:** CWS 25 PRS 0 MTE 25 ETE 50 PRE 0

5. Credits**:** 2 6. Semester**: Both** 7.Subject Area**: PEC**

8. Pre-requisite**: Nil**

9. Objective: To impart knowledge of widespread deterioration in ground water quality and need for protecting ground water resource from contamination.

10. Details of Course:

S. No.	Contents	Contact Hours
1.	**Introduction:** Need for ground water protection. Common causes of ground water quality deterioration. Factors responsible for aquifer pollution and its Assessment. Ground water protection guidelines.	4
2.	**Methods :** Approaches of Mapping aquifer pollution vulnerability. Various indices of assessment of ground water vulnerability. DRASTIC Index approach. GOD Index. Ground water vulnerability maps: their uses and limitations. Guidelines for ground water protection. Case Studies.	7
3.	**Inventory :** Subsurface contaminant Load, classification and Estimation of Subsurface contamination load: Diffuse sources and Point sources of pollution.	4
4.	**Assessment :** Control of Ground Water Pollution Hazards: Evaluation of pollution hazard and water supply pollution Hazards. Strategies for control of ground water pollution. Mounting Ground Water Quality Protection programs.	6
5.	**Ground Water Legislation** and Protection Regulation: Model Ground Water Act in India; Status of its Implementation in Indian States. Ground Water Protection Regulation and Governance; Case Examples.	7
	Total	**28**

2. Contact Hours: **L: 2** **T: 1/2** **P: 0**

3. Examination Duration (Hrs.): **Theory** 2 **Practical** 0

4. Relative Weightage: CWS 25 PRS 0 MTE 25 ETE 50 PRE 0

5. Credits: 2 6. Semester: **Both** 7. Subject Area: **PEC**

8. Pre-requisite: **Nil**

9. Objective: The objective of this course is to provide training on planning to water supply and sanitation programs in the rural sector.

10. Details of Course:

S. No.	Contents	Contact Hours
1.	Village environment, Sources of water: quantity, quality and accessibility; Assessment of demands, planning and construction of direct and community water supply schemes; Source protection measures; Cost effective water treatment technologies	5
2.	Type and source of wastes; Management of solid and liquid waste; Low cost sanitation planning and construction including household toilets, community toilets; Innovative and adaptable initiatives like compost pits, vermin composting, common and individual bio gas plants, and low cost drainage apart from collection, segregation, and disposal of household waste at the village level, Disposal and Reuse issues	5
3.	Public health concepts, review of key health determinants, public health priorities in emergency and development settings, sustainable community health/hygiene: mechanisms for delivery and management	4
4.	Social, cultural, political and economic aspects linked to water and sanitation practices, Initiatives of National and International agencies in empowerment of communities by promoting pro-community policies, programs and financial support and skill upgradation in developing countries	4
5.	Assesment of current conditions and trends in water and sanitation services in low and middle-income countries; Strategies to improve water and sanitation conditions; lessons learned; key interventions	3
6.	Soft Skills for Water and Sanitation Professionals	3
7.	Case studies and projects	4
	Total	**28**
